**PUBLIC NOTICE**

Department of State  
 F-2010-1185

Date of Issuance - January 26, 2011

The New York State Department of State (DOS) is required by Federal regulations to provide timely public notice for the activities described below, which are subject to the consistency provisions of the Federal Coastal Zone Management Act of 1972, as amended.

The United States Coast Guard (within the U.S. Department of Homeland Security) has determined that the proposed activity complies with and will be conducted in a manner consistent to the maximum extent practicable with the approved New York State Coastal Management Program. The consistency determination, draft Programmatic Environmental Assessment (PEA) for the Nationwide Use of High Frequency (HF) and Ultra High Frequency (UHF) Active Sound Navigation and Ranging (SONAR) Technology, and accompanying public information and data is available for inspection at the New York State Department of State offices located at One Com-

merce Plaza, 99 Washington Avenue in Albany, New York. The U.S. Coast Guard's Federal Register notice, draft PEA document, and draft Finding of No Significant Impact (FONSI) are available and may be downloaded at <http://www.regulations.gov> and are identified by the docket number USCG-2009-0166.

In F-2010-1185, the United States Coast Guard is proposing the nationwide use of active SONAR technologies that operate at frequencies of 50 kiloHertz (kHz) and higher frequencies (to 500 kHz) and which will be initiated from mobile platforms. Active SONAR technology would be used in support of USCG missions to locate, image, and classify submerged/ underwater targets of interest (TOI). The PEA is a program-level document that will provide the USCG with management-level analysis of the potential impacts of each alternative on the human and natural environments.

The proposed action may result in direct and/ or indirect impacts to marine mammals and certain fish species within New York State's coastal waters. In particular, marine life known to possess auditory abilities within the proposed frequency range includes all species of odontocetes or 'toothed' whales (which group includes sperm whales, pygmy sperm whales, beluga whales, and all of the dolphins and porpoises), all pinniped species (on the east coast this encompasses all phocids or 'true seals'), and clupeid fish (e.g. Atlantic shad, Atlantic herring, sardines, menhaden, and others) which may be forage species for marine mammals as well as commercially or recreationally important species.

According to the information provided to the Department of State, the United States Coast Guard has determined that the proposed action will have no significant adverse effect on marine life or other resources found in New York's coastal area. High frequency and ultra high frequency SONAR could be employed at the sole discretion of the U.S. Coast Guard throughout the New York coastal area which includes waters of the New York-New Jersey Harbor, Atlantic Coast, Long Island Sound, Hudson River Estuary, Saint Lawrence River and Seaway, as well as Lake Ontario, and Lake Erie.

Any interested parties and/or agencies desiring to express their views concerning the above proposed activities may do so by filing their comments, in writing, no later than 4:30 p.m., 15 days from the date of publication of this notice, or by February 11, 2011.

*Comments should be addressed to:* Department of State, Office of Coastal, Local Government and Community Sustainability, One Commerce Plaza, 99 Washington Ave., Suite 1010, Albany, NY 12231, (518) 474-6000, fax (518) 473-2464

This notice is promulgated in accordance with Title 15, Code of Federal Regulations, Part 930.
