SUPPLEMENTARY INFORMATION: The Commission established regulatory requirements for consumptive water use at Part 806, including general provisions, application procedures, standards for review and terms of approval. The regulations provide for mitigation by project sponsors for their consumptive water use during low flow periods, and identify several options for such mitigation while reserving discretion for the Commission to determine if the manner of mitigation proposed is acceptable. In consideration that mitigation is based on the elimination of manmade impacts caused by consumptive water use during low flows and the return to natural flow conditions, and recent work in quantifying and characterizing consumptive water use and mitigation requirements in the basin, the Commission has refined its strategy for meeting mitigation needs. This policy, as posted on the SRBC Public Participation Center webpage at www.srbc.net/pubinfo/publicparticipation.htm, introduces the Commission's consumptive water use mitigation strategy and procedures that should be followed both by the agency and project sponsors.

The proposed policy is intended to provide insight regarding the determination of an acceptable manner of mitigation to be provided by project sponsors for regulated consumptive water use. It also describes contemporary consumptive water use mitigation principles and the criteria utilized by the Commission in its review of proposed mitigation plans submitted as part of a consumptive water use application.

The proposed policy applies to the review of all consumptive water use applications filed with the Commission, including applications for new projects, project modifications proposing to increase consumptive water use, project renewals, and pre-compact consumptive water use if located in a water critical area. It is also applicable on a case by

case basis in limited circumstances. It has been developed to provide insight to the regulated community and also to the Commission's Project Review Program, and any other staff involved in regulatory requirements of the Commission. It may also be used by the public to gain information and insight on the Commission's approach to consumptive water use mitigation.

Opportunity to Appear and Comment:

Interested parties may appear at the hearings to offer comments to the Commission on the proposed policy. The presiding officer reserves the right to limit oral statements in the interest of time and to otherwise control the course of the hearings. Guidelines for public hearings will be posted on the Commission's website, www.srbc.net, prior to the hearings for review. The presiding officer reserves the right to modify or supplement such guidelines at the hearings. Comments mailed or electronically submitted must be received by the Commission on or before January 7, 2017, to be considered.

AUTHORITY: Pub. L. 91-575, 84 Stat. 1509 et seq., 18 CFR Parts 806, 807, and 808.

In F-2016-0497, Linda Sanford, is proposing a 780 SF seasonal dock with water and electric utilities, within the Town of Southold, Suffolk County. The dock will be utilized for seasonal/summer storage on the property owner's boat. No dredging will occur. The CCA piles for the dock will be driven by pneumatic equipment on a barge. The deck will be grated decking as required by the Town of Southold to increase the amount of sunlight that can penetrate through the structure to the vegetation below. The barge will maintain a contaminant boom around the perimeter of the work site to contain any excess construction materials from floating into the bay. The only excavation that will occur will be to extend water and electric utilities to the dock. To minimize disruption, only two, 4'X4' access pits will be dug; one at the connection at the property and one at the dock so that a 1" water line and 2" electrical conduit can be jacked under the beachfront. The water line will be 6 LF deep minimum and the electrical line will be 4 LF deep minimum, separated by a minimum of 5 LF. The attached plans show the proposed location of the dock. The dock will be designed in accordance with 6 NYCRR 66.15(b)(14) and the Town of Southold Wetland Code 275.

In F-2016-0526, The Town of Westfield, is proposing to stabilize a fishing access site along Chautauqua Creek in Town of Westfield, Chautauqua County. A total of 150' of streambank will incorporate large rock rip-rap, pinned to the shale bedrock and stacked up the bank to ordinary high water. Willow poles will be added to the downstream site at the top of the project. It is not feasible to incorporate willow at the upstream site due to the shade present and the existing access trail. This project will stabilize the eroding bank, prevent sedimentation of the stream and maintain an access trail at the top of the bank. Chautauqua Creek is a spawning stream for lake fish, and a south after fishing location. It has great impact on the tourist draw and economic activity for local businesses in the town.

No trees will be removed in construction of this project. Best management practices will be used to reduce sedimentation of the stream during construction. All work will be done during low water periods, with as much work being done from the bank as possible. All disturbed areas will be seeded and mulched following construction.
